HENDRIX GENETICS SWINE

Product Portfolio

OUR SIRE LINES

OPTIONS ACROSS GROWTH AND QUALITY

Hypor Kanto

Outperforms the standards in meat quality and criteria.

- Meets Slaughterhouse Performance Indicators
- High Litter Size
- Excellent Piglet Quality and Vitality

Hypor Magnus

Exceeds the standard slaughterhouse performance indicators

- Great Meat characteristics
- Superior Handling & Robustness
- Strong Feed Conversion Ratio & Slaughterpig Growth

Danish Duroc

One of the best feed conversion ratio on the global market

- Great Meat characteristics
- Consistently meets Slaughterhouse Performance Criteria
- Excellent Piglet Quality and Vitality

Hypor Maxter

Exceptional piglet quality and vitality

- High Litter Size, including a “piglet boost”
- Leader in Muscle Depth, with heavy hams and shoulders
- Strong Feed Conversion Ratio & Slaughterpig Growth

Slaughter Pig Growth

Our sire lines are designed to deliver exceptional growth performance and efficient feed conversion—key drivers for profitability.

Duroc-based lines combine balanced growth with robustness and superior meat quality, making them ideal for premium markets.

Pietrain genetics add value through strong piglet vitality and increased litter size, helping producers boost output without compromising efficiency.

Together, these options give producers flexibility: achieve market weight quickly or maximize piglet numbers to meet diverse production goals.

Meat Quality

Meat quality remains a defining trait of Duroc genetics, offering marbling, tenderness, and flavor for premium markets.

Beyond taste, both Duroc and Pietrain lines deliver predictable carcass quality with consistent size and weight, ensuring streamlined processing and compliance with market specifications.

This reliability supports efficiency at the slaughterhouse and gives producers confidence in achieving high yields and customer satisfaction every time.

Piglet Quality & Robustness

Robustness and piglet vitality are essential for sustainable production.

Duroc-based lines offer a unique balance across all traits, ensuring consistent results from birth to finish. While Pietrain genetics traditionally focus on carcass traits, they also deliver exceptional piglet robustness and vitality, reducing losses and supporting welfare standards.

These options give producers flexibility to meet diverse market needs without compromising reliability.

FLEXIBLE PERFORMANCE ADVANTAGE:
GROWTH, QUALITY, ROBUSTNESS

OUR HYBRIDS

GENETICS THAT FIT YOUR GOALS

Hypor Libra

Exceptional ease of management

- Robustness, Longevity & High Retention Rate
- Consistently meets Slaughterhouse Performance Criteria

Nexus 100

Total System Profitability

- Consistency and Predictability in Performance
- Stability in Operational and Management Practices

Danish Hybrid

Excellent litter performance

- Strong Feed Conversion Ratio & Slaughterpig Growth
- Consistently meets Slaughterhouse Performance Criteria

Hypor Libra

The Hypor product line is built for robustness and ease of management, making operations more efficient.

The Hypor Libra stands out as the easiest sow to work with, requiring minimal management while delivering consistent performance.

Its superior genetics ensure adaptability across different production systems, making it a reliable choice for farms worldwide.

Nexus 100

The Nexus 100 is designed for producers aiming for Total System Profitability through consistency, efficiency, and control.

It delivers maximum predictability and survivability, ensuring fewer health risks and less management effort.

With proven health and balanced genetics, Nexus 100 guarantees high survivability, efficient growth, and ease of handling, making it the ideal choice for farms where every piglet counts.

Danish Hybrid

The Danish Genetics product line is designed to maximize economic returns and ensure long-term profitability for advanced production systems.

The Danish Hybrid combines prolific sows with excellent feed efficiency and fast-growing finishers, providing superior results in modern pig production.

THE RIGHT FIT FOR EVERY SYSTEM:
ROBUST, BALANCED, EFFICIENT

OUR DAM LINES

THE STRATEGIC CHOICE FOR CONSISTENT RESULTS

Hypor Landrace

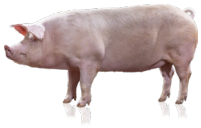
Calm & easy to manage

- Strong, vital and vigorous piglets
- High structural soundness and longevity

Hypor Large White

Reproductively efficient sows

- Heavy & uniform piglets
- Lean & feed-efficient



Danish Landrace

High fertility performance

- Robust & strong
- Excellent mother abilities

Danish Yorkshire

Excellent parenting skills

- High growth rate
- Low feed consumption

Hypor Dam Lines

Through a balanced breeding approach, Hypor focuses on reproduction efficiency, piglet quality, and finishing traits.

Depending on biosecurity needs, farms can integrate these purebred lines to produce Hypor Libra on-site.

Together, these dam lines deliver superior mothering ability, fertility, growth performance, and meat quality, ensuring consistent results and adaptability for modern pig production.

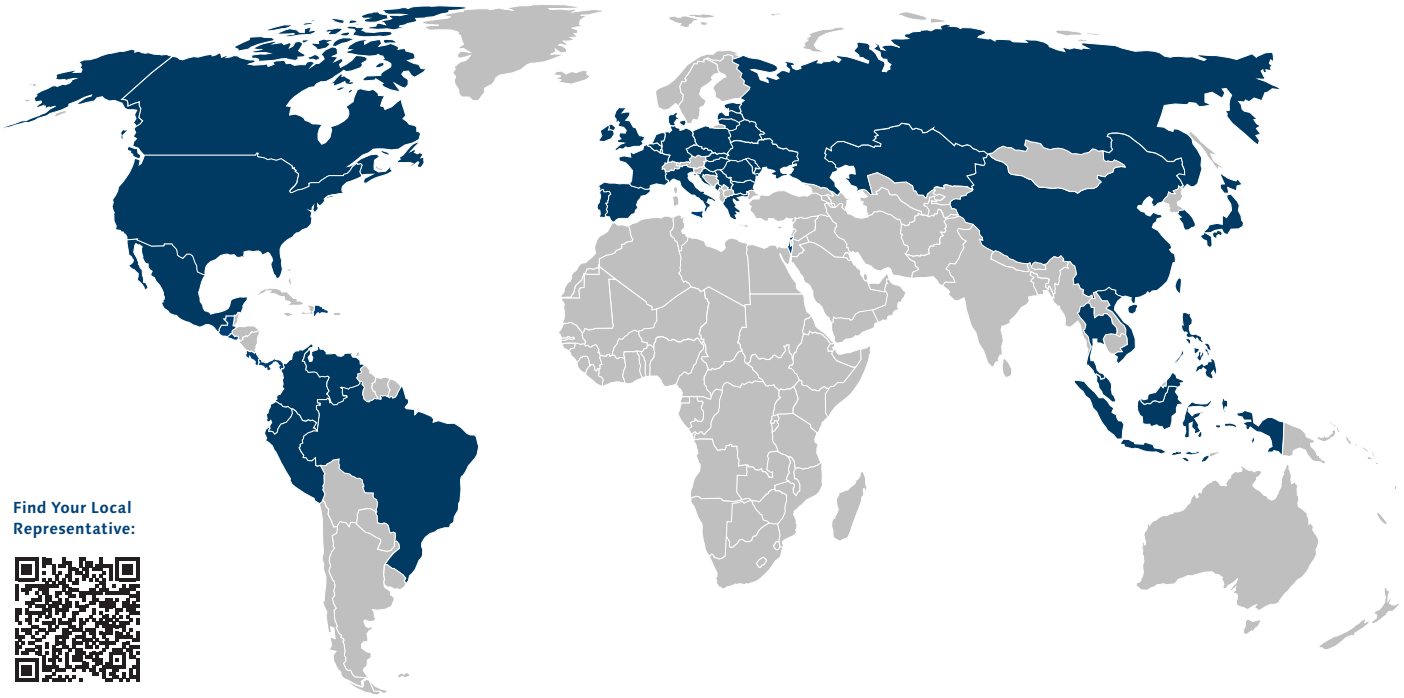
Danish Genetics Dam Lines

The Danish Landrace is renowned for high fertility, strong mothering ability, and excellent meat quality, while the Danish Yorkshire adds strength, sound body posture, and superior performance in piglet survival, feed efficiency, and growth.

Together, they provide optimal traits for crossbreeding programs and consistent production outcomes.

DAM LINES THAT DELIVER:
FERTILITY, STRENGTH, ADAPTABILITY

GLOBAL REACH – LOCAL PROXIMITY



Find Your Local Representative:

Our Mission

Providing a complete genetics portfolio with cutting-edge R&D, long-term partnerships and customer-focused solutions with global reach to drive progress and deliver value for the pork value chain.

Our Vision

Empowering the pork value chain to achieve sustainable performance through continuous improvement.

Our Values

In a highly competitive market, the pork value chain faces growing challenges and increasing pressure on their operations.

Sustainable performance is essential, and continuous improvement is not optional it's a necessity.

Hendrix Genetics Swine builds upon a long history and is a leader, now and in the future.

We keep you ahead of the game by leveraging cutting edge R&D, combining Hendrix Genetics' multi species expertise with the strengths of Hypor and Danish Genetics.

We offer best in class genetics and support, tailored to customer needs, delivering solutions that drive performance and profitability.

By providing global reach and local proximity we ensure long term reliable partnerships.

YOUR GLOBAL GENETICS PARTNER
FOR A SMARTER AND STRONGER PIG PRODUCTION

Seizing Opportunities and Tackling Challenges in Modern Pig Production with Hendrix Genetics Swine

High feed costs put pressure on margins. Securing skilled labor poses ongoing challenges. Robust biosecurity measures are essential to address growing health concerns. And in many markets, animal welfare is shaping production standards.

To stay competitive, producers need genetics that deliver consistent performance every day – and align with the specific priorities of their market.

That's where Hendrix Genetics Swine comes in.

With the combined expertise of Hypor and Danish Genetics, we provide advanced breeding solutions designed to help producers optimize production, match meat quality with the market's expectation, and achieve sustainable and economical profitability.

Why choose Hendrix Genetics Swine?

- Proven genetics for every production system
- Cutting-edge R&D for continuous improvement
- Tailored support to meet your goals
- Global reach, local expertise for long-term partnerships

Together, we're building a better future for swine breeding – and for your business.

Hendrix Genetics: The Global Parent Company Behind the Swine Business Unit

Hendrix Genetics is a global leader in animal breeding, genetics, and technology, committed to advancing animal performance across species.

Breeding programs cover laying hens, turkeys, traditional poultry, swine, salmon, shrimp, and trout—delivering solutions that create value throughout the entire protein chain.

Through collaboration with partners across the industry, Hendrix Genetics develops innovative and sustainable approaches to influence outcomes from the very start.

The goal is clear: produce animals that thrive under diverse conditions and meet the needs of every market.

Each Hendrix Genetics brand operates its own specialized breeding program, guided by proven philosophies and aligned with regional priorities.

Multi-Species Expertise: The Power of Connecting Knowledge

Hendrix Genetics combines expertise across swine, poultry, and aquaculture to deliver smarter, more resilient breeding solutions.

This unique approach allows breakthroughs in one species to accelerate progress in others, creating a cycle of continuous improvement.

By leveraging decades of genetic data and advanced analytics, Hendrix Genetics provides unmatched predictive power - helping producers anticipate market trends, strengthen biosecurity, and adapt to changing conditions.

This integrated knowledge ensures solutions that are not only innovative but also practical and sustainable for every production system.

What does this mean for you?

Shared innovation: Advances in one species accelerate improvements in others.

Predictive power: Decades of combined research deliver reliable genetic solutions.

Adaptability: Integrated expertise supports sustainable production in changing markets.

Global perspective, local impact: Wherever you operate, Hendrix Genetics provides solutions that fit your reality.
